

**Support for HB 2527**

Chairman Delperdang and the members of the Committee:

Laborers' Local 1290 is more than willing to support house Bill 2527's proposal to build a natural gas power plant in Kansas. We have members across the State of Kansas that are hard workers wanting to make this State one of the best. Kansas has been lagging behind in manufacturing facilities. In the last few years people have finally noticed that we have more to offer with great construction workers across all crafts.

Every knows the people that live here and work here are some of the best. Economic development keeps the economy rolling and the development means more power generation. Every investment will mean more good jobs in the state of Kansas. The need for more power in the State of Kansas means more business will come here. This bill will help with providing jobs for not just construction workers but plant workers as well. A win across the board.

**Business Manger Jeffery Philgreen**
