MEMORANDUM

To: House Committee on Water and Environment
From: Nick Myers, Office of Revisor of Statutes
Date: February 15, 2018
Subject: House Bill 2641

House Bill 2641 would impose a daily limit on the amount of fluids produced from oil and gas operations that could be disposed of into a class II injection disposal well. HB 2641 would prohibit any operator of a class II injection disposal well from injecting more than 8,000 barrels of saltwater or other fluid per day into any such well. Additionally, each operator of a class II injection disposal well would be required to submit quarterly reports to the Kansas Corporation Commission that provide such operator's daily injection volumes.

"Class II injection disposal well" is defined in HB 2641 as a well that is used to inject saltwater or other waste fluids that are brought to the surface in connection with oil or natural gas production.
