

Re: HB 2601

February 11, 2020

Honorable Representative Steve Huebert,

Thank you for listening to the concerns of the people across Kansas in regards to the continued increase in the vaccine schedule and the over reach by the KDHE. Thirty years ago I was aware of two girls that sustained tremendous damage from a vaccine. One has since died and the other remains in constant 24 hour a day care which is becoming more difficult for her aging parents, not to mention the financial burden.

This opened my eyes 30 years ago that the benefit always has to outweigh the risks. This is a parental responsibility and a privilege which is a freedom and liberty issue. The lack of sufficient studies has always been a concern to me. Long term consequences should be considered with all drugs and vaccines. The "mindset" that we can vaccinate our way into health is based on fallacies and assumptions. It's time to pause and ask some serious questions! Thank you for listening to my concerns.
