

Frank DeRemus: Oral Testimony
Proponent for Bill HB2273

Good morning. My name is Frank DeRemus and I would like to thank you for giving me the opportunity to voice my opinion on the turbine setback bill HB2273, as I am a proponent for this bill.

My concerns are for the safety and health issues that these turbines impose on the Kansas communities.

There have been many conclusive studies done by very reputable sources such as NASA, MIT, Harvard, and the World Health Organization, that now know for a fact of the health detriments that these machines can cause. Information that the wind industry has relentlessly tried to deny and suppress in order to further their profiteering at the cost of human health, some of these known health effects are; high blood pressure, cardiovascular deaths, strokes and degradation of the immune system, and many more, all due to the low and ultra low frequencies and air pressure from these turbines.

Thank you again and God Bless
